Broadworks Meet-Me Audio Conferencing

Meet-Me Audio Conferencing

This high-definition (HD) conferencing application is fully supported on existing BroadWorks® network elements, so there is no additional purchase necessary. Provisioning and service administration is completely integrated into the BroadWorks platform, enabling service providers and enterprise managers to assign and manage conference features alongside hosted PBX and other BroadWorks applications.

Overview

The easy-to-use web-based moderator client, used for either type of conference, can be launched from within the portal or from the Microsoft Outlook add-on, and can be used to view, manage or add participants during an active conference. Conference hosts can include a "Call Me Now" option in their meeting invite. Participants who receive the meeting invitation and click on the "Call Me Now" link are routed to a web page which prompts them to enter in their phone number. The request is sent to BroadWorks which then dials for the participant and connects them to the conference. eliminating any potential toll charges for the call.

DTMF:

Dual Tone Multi Frequency (DTMF) conference control commands are also available to both moderators and participants, and can be invoked at any time during the conference. When a participant logs in as a moderator, they are given additional functions including locking and unlocking the conference, recording options, inviting new participants, and more. The reservation-less meet-me conferencing service allows participants to dial into an existing bridge number at any time without scheduling or operator intervention, while the scheduled conferencing is designed to support the need for recurring or future conferences.
